

Triple printing Iced-Coffee cup
By Jenn Mason

This technique can be used on a standard art piece or in a fun customizable way like this cup.

Materials needed:

Printing plate
Printable acrylic sheets (printed with chosen design)
Stencil sheets - Grafix
Brayer
Printing paints and/or acrylic paints
Sponge
ScanNCut – Brother International Corporation
Scissors
Customizable iced-coffee cup
Scrap paper
Faux Bois tool

Instructions:

1. Use the digital cutter or craft knife and cutting mat to cut out your desired shape from the center.
 2. Use a brayer to roll printing ink onto the printing plate and then run the faux bois tool through the ink to create your desired texture.
 3. Clean the brayer quickly.
 4. Place the cut stencil sheet printing side down on the printing plate, cover with scrap paper and roll over the surface with the brayer.
 5. With the printed acrylic sheet printed side down, place the cut and textured stencil plate down on the surface. Use another piece of scrap paper and the brayer to transfer the texture to the back of the printed acrylic sheet.
 6. Remove the scrap paper and dip the sponge in a second ink or acrylic paint color and fill the inside of the stencil shape.
 7. Carefully remove the cut stencil to reveal the printed piece. Let dry completely.
- Use the template from the coffee cup to cut the final artwork to size and slip it into the cup.
